

# Carefx Corporate Fact Sheet

## OVERVIEW

An innovative provider of solutions that advance and improve patient care delivery, Carefx has created its Fusionfx solution suite to bridge healthcare information gaps, enhance clinical and business processes, and enable rapid and accurate decision-making by care givers. Unlike other solution providers, Carefx offers a flexible solution suite designed to fit an organization's unique environment and provide a practical, seamless and intuitive experience for locating, accessing and interacting with patient information.

Healthcare organizations that utilize Carefx's technology solutions experience significant enhancements in clinicians' productivity and satisfaction. Carefx solutions interoperate with legacy IT infrastructure, allowing healthcare entities to leverage their existing technology investments. As architects of "change without change," chief information officers (CIOs) and chief medical information officers (CMIOs) partner with Carefx to streamline and enhance workflow without placing extra burdens on care providers or disrupting the process of care delivery. Carefx implementations are completed in as little as 90 days, saving time and money through scalable technologies that address the growing and changing needs of an organization.

## PRODUCTS

The Fusionfx solution suite provides standards-based, service oriented, workflow portals for healthcare. Fusionfx gives caregivers a unified view of relevant patient information by creating composite views of data from multiple sources. A library of nearly 200 portlets, developed using a patent-pending workflow technology, enables the rapid build-out and deployment of provider-centric portals that meet the unique clinical and business process needs of an organization.

Fusionfx integrates clinical context and single sign-on to provide a seamless end-user experience with automated launching of native applications. The solution streamlines how providers interact with patient data, reducing clinical errors and increasing individual productivity. By closing the gaps that occur between different providers, venues, and systems, care providers can offer a more consistent, higher quality experience for the patient.

## TARGET MARKETS

Carefx technology serves to improve patient care for organizations of any size and at any stage in the technology game:

- Hospitals
- Integrated Delivery Networks (IDNs)
- Regional Health Information Organizations (RHIOs)
- Health Information Exchanges (HIEs)
