

FUSIONFX® PERFORMANCE MANAGEMENT AND IMPROVEMENT

Fusionfx Business Intelligence

Drive alignment, transparency and accountability across the enterprise.

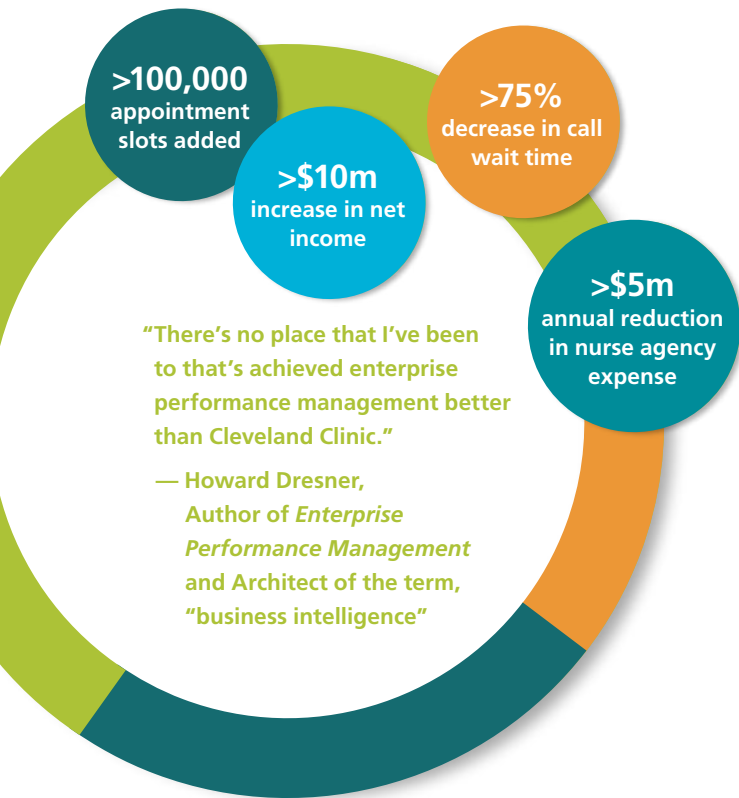

CAREfx®
Simply Advancing Healthcare

The fight is on to improve quality, safety and efficiency in this revolutionary era of meaningful use and healthcare transformation. But healthcare organizations can't go it alone. More than simple data, they need business intelligence (BI) to make rapid, accurate, evidence-based decisions.

Whether you're an executive or a clinician, you'll experience a significant boost in financial performance, workforce management, quality and patient outcomes.

With BI dashboards from Carefx, you'll have the power to turn disparate data into actionable insights, be better positioned to address meaningful use and facilitate healthcare transformation and improve clinical and financial outcomes.*

Consider the evidence at Cleveland Clinic:

* Business Intelligence Dashboards from Carefx—originally developed and implemented by Cleveland Clinic.

The power of collaboration: Carefx, Cleveland Clinic and you

Imagine leveraging the rich but sometimes hidden treasure trove of data within your various transaction systems. Picture making more rapid, accurate and evidence-based decisions in finance, operations and clinical care.

The impossible dream? No longer—if you trust and invest in the business intelligence (BI) dashboards now available from Carefx, the leading provider of interoperable workflow solutions for the healthcare industry.

By reviewing strategic intelligence generated through dashboards designed and implemented by Cleveland Clinic, executives, clinicians and frontline managers can analyze and manage physician performance, patient experience and identify where to implement efficiencies for performance and clinical workflow gains.

A dashboard can focus on physician scorecards, core measures, mortality rates, throughput or patient experience. But each dashboard has one feature in common—it generates transparent, credible data for solving all-too-typical challenges in clinical care, finance and operations, and patient experience.

A twelve year legacy continues...

Cleveland Clinic speaks from experience and a twelve-year legacy of alignment and accountability. Its passion for mobilizing business intelligence to drive performance has produced solutions to its own challenges in patient access and financial performance.

Now Carefx is building on that legacy—business intelligence dashboards, each designed to complement Carefx's Fusionfx solution suite, an interoperable workflow platform that generates real-time, composite views of patient information from multiple sources and systems.

Managing enterprise performance

BI dashboards make the most of your clinical database by indexing information that is drillable through your organization's specific clinical and location structure.

The result? Millions of valuable transaction data cells and a color-coded system of red, yellow and green lights and exclamation points guide you to critical information cells where special attention is required.

In just a few mouse clicks, you can drill down from hospital-wide performance data to the performance of specific nursing units.

The Throughput Dashboard helps alleviate operational bottlenecks in the inpatient units and the Emergency Department—resulting in increased census, operational efficiency and revenue.

Increasing the average daily census with the Throughput Dashboard

One of your throughput initiatives is targeting 30 percent of your patient discharges by 11:00 a.m. Which departments are hitting this target? Does this vary by type of discharge? Which nursing units within a department are having more success than others?

An intuitive click or two pinpoints the areas that need intervention to drive the change required for your initiatives to succeed. One screen displays the discharge metrics that when highlighted, make performance obvious, including department and unit views.

Seeing that the surgery department is underperforming, one click takes you to the relative surgical nursing units, comparing their performance side-by-side. Why is unit CB4 succeeding, and what knowledge can be shared with the other units?

“The Business Intelligence Solution, originally developed by Cleveland Clinic, has accelerated clinical, operational, and financial performance improvement at Cleveland Clinic.”

— Chris Donovan, Senior Director/
Finance, Cleveland Clinic

Key benefits

Expertise: Reap the benefit of dashboards originally developed by Cleveland Clinic medical, operational and finance leaders to comprehensively drive performance throughout the institution.

Speed to value: Experience out of the box, enterprise-ready tools with time to solution in as little as 30 to 60 days, including hierarchy building, data mapping, hosting and training. If you already have an existing business intelligence infrastructure, use dashboards as an accelerator to begin receiving benefit even sooner.

Comprehensive: Address every critical dimension of financial, clinical and operations improvement—from patient access, nursing and throughout, to blood utilization, service line management and quality.

Executive involvement: Invite executives and managers to evaluate physician and department efficiencies, identify gaps in patient flow and target problems in quality, safety and patient experience.

Clinician engagement: Allow clinicians to compare personal patient flow averages against those of peers and best practices.

Financial scrutiny: Analyze financial data to better allocate resources, adjust staff or act on MS-DRG charges and rankings from affiliated hospitals.

Minimal resource commitment: Invest minimal resources thanks to a cost-effective software-as-a-service (SaaS) model and data feeds from your clinical database. Monthly licensing fees include hosting and product support.

Data drill downs: With just a few mouse clicks, drill down to data on discharges, bed availability and daily census, as well as performance feedback on units, groups, facilities and product and service lines.

Quality focus: Experience a coordinated business intelligence infrastructure that enhances data extraction, utilization, reporting and mining and assesses system-wide patient flow problems.

Remote access: Tap into dashboards no matter what the time of day or where you happen to be through a remote accessibility feature.

Innovation: Share fresh ideas on product enhancement, prioritization and design by focusing on core pain points—from documentation and coding, resource utilization and clinical effectiveness, to capacity management, patient safety and OPPE compliance.

About Carefx Corporation

Carefx supports healthcare organizations in achieving their vision of advancing the quality and safety of patient care delivery through its Fusionfx suite of interoperable workflow solutions. Fusionfx streamlines and simplifies clinical and business workflow and connects care providers to the information they need—where, when and how they need it. By managing care transitions and information gaps between diverse systems, departments and facilities, Fusionfx delivers crucial patient information with speed, efficiency and logic.

Carefx supports more than 700 hospitals, health systems and health information exchanges (HIEs) across North America and Europe.
